

Environmental Policy

On Site Generation Ltd is a renewable energy company providing an integrated approach to saving energy and installing renewables. Our key aim is to provide affordable, best practice advice and technologies in renewable energy and energy efficiency so we can all share in a zero carbon economy.

We want to help our customers find ways to reduce their carbon dioxide emissions and energy costs. We can design, install and maintain renewable energy systems including solar water heating, heat pumps, biomass boilers and wind turbines for the home, business and community.

Everyone at On Site Generation Ltd is committed to improving the local and wider environment so future generations benefit from our actions. Our day to day activities focus on preventing pollution and complying with all present and future environmental legislation and other regulations relevant to our operations.

Our continual environmental improvement programme is a key process in our business planning and includes our commitment to:

- ✿ Reduce the impacts from our business travel and encourage all staff to use public transport where practicable
- ✿ Support the training of our staff to enable them to implement this environmental policy and consider the wider sustainability issues relevant to our business
- ✿ Reduce our consumption of resources and minimising waste and encourage recycling within our day to day activities
- ✿ Work with suppliers and sub contractors who have a commitment to environmental improvement
- ✿ Establish objectives and targets to support the improvements in our organisation

Our performance and this Policy will be regularly reviewed by the Company Directors to ensure its effectiveness in delivering our environmental commitments.
